2. Purpose & Scope

Purpose

To define the minimum weather requirements for Aeria Solutions RPAS operations, ensuring safety, compliance, and risk mitigation during all flight activities.

Scope

This policy applies to all RPAS operations conducted by Aeria Solutions, including basic, advanced, and special operations. It covers all crew members, contractors, and subcontractors involved in flight activities.

3. Definitions & References

Definitions

- Operational Limits: Manufacturer-specified environmental tolerances, including wind, precipitation, and temperature.
- Weather Monitoring Tools: Approved forecasting and real-time monitoring systems used to assess weather suitability for flight.

References

- Canadian Aviation Regulations Part IX
- Aeria RPAS Procedures
- Aeria HSE policy

4. Policy Statement

RPAS operations must not be conducted outside of the defined minimum weather requirements. Aeria Solutions enforces an additional **20% safety buffer** below the manufacturer's specified maximum weather limits (e.g., wind speed, temperature, precipitation). Operations must be postponed, adjusted, or cancelled if conditions exceed these thresholds.

5. Procedures

Step-by-Step Actions

Weather Assessment (Pre-Flight):

- Review weather forecasts using approved tools (e.g., Environment Canada, Windy).
- Confirm conditions fall within 80% of the manufacturer's stated limits.

Real-Time Monitoring (During Operations):

- Continuously monitor on-site conditions.
- Stop or suspend flights if weather conditions deteriorate beyond policy limits.

Postponement/Cancellation:

- Operations must be postponed or cancelled if forecasted or real-time conditions exceed thresholds.

Documentation:

- Record weather assessments and decisions in the pre-flight planning documents.

Roles & Responsibilities for Each Step

- Accountable Executive: Approves policy updates and enforces compliance.
- Operations Manager: Verifies weather checks are documented prior to mission approval.
- PIC: Responsible for monitoring weather before and during operations; has authority to abort flight if conditions are unsafe.
- VO & Crew Members: Support PIC by observing environmental conditions and reporting changes.

Tools, Forms, or Checklists to be Used

- Environment Canada forecast system
- Windy application
- AirData application
- Site weather logs and pre-flight checklists

Safety/Compliance/Quality Requirements

- All RPAS operations must comply with CARs operational weather limits.
- RPAS must not be flown if icing is present or expected

Reporting or Escalation Processes

- Deviations must be reported immediately via the Incident Reporting process.
- Escalate unresolved safety concerns to the Operations Manager and Accountable Executive.

6. Roles & Responsibilities

Management

- Provide access to approved weather forecasting and monitoring tools.
- Ensure annual review of weather limits based on regulatory updates and manufacturer specifications.

Supervisors

- Confirm crews perform and document weather assessments.
- Stop operations if conditions exceed safe thresholds.

Staff

- Conduct weather assessments and monitor conditions in real time.
- Suspend or abort operations when safety is compromised.

7. Monitoring, Compliance & Enforcement

How Compliance Will Be Monitored

- Review of pre-flight weather assessment logs.
- Spot checks during operations by the Operations Manager.
- Annual compliance review at AGM.

Consequences for Non-Compliance

- Immediate grounding of operations.
- Mandatory retraining in operational safety.
- Progressive discipline for repeated violations.

Reporting Obligations

- Weather assessments and related decisions must be documented and retained for 24 months in accordance with CAR 901.48

8. Sign-Off & Acknowledgment
