2. Purpose & Scope

Purpose

To establish structured protocols for recognizing, preventing, and mitigating fatigue during RPAS operations. Fatigue management ensures that crew members remain alert, capable, and safe while performing duties.

Scope

Applies to all Aeria RPAS operational personnel, including Pilots in Command (PICs), Visual Observers (VOs), Operations Managers, subcontractors, and all supporting staff involved in RPAS missions.

3. Definitions & References

Definitions

- Fatigue: A state of physical and/or mental exhaustion that reduces an operator's ability to perform safely and effectively.
- Acute Fatigue: Short-term exhaustion due to recent activity or inadequate rest.
- Chronic Fatigue: Long-term cumulative exhaustion from sustained stress or insufficient recovery.

References

- Aeria CRM Manual, Section: Fatigue Management
- Aeria HSE Fatigue Management Policy
- Transport Canada CAR 901.19 (Crew Fitness for Duty)

4. Policy Statement

Aeria Solutions requires all RPAS crew to monitor and manage fatigue proactively. Operators must complete fatigue self-assessments, comply with rest and break schedules, and report fatigue concerns without fear of reprisal. Fatigue-related risks must be addressed immediately to ensure safe and effective operations.

5. Procedures

Step-by-Step Actions

Pre-Mission:

- All operators complete a fatigue self-assessment.
- PIC or Operations Manager reviews team readiness and identifies potential fatigue risks.

During Mission:

- For missions longer than 2 hours, all operators take a 15-minute break every 2 hours.
- VO monitors crew members, including PIC, for signs of fatigue (e.g., slower responses, irritability).
- If fatigue detected, tasks are reassigned or additional breaks are enforced.

Post-Mission:

- Crew discusses fatigue challenges during debrief.
- Fatigue incidents or near-misses are documented for trend analysis and future mitigation.

Roles & Responsibilities for Each Step

- PIC: Ensure own fitness for duty, monitor crew fatigue, and reassign tasks if necessary.
- VO: Observe PIC and crew for fatigue signs; immediately report concerns.
- Operations Manager: Confirm adherence to fatigue countermeasures and scheduling practices.
- Crew Members: Conduct honest self-assessments, apply fatigue countermeasures, and report when unfit.

Tools, Forms, or Checklists to be Used

- Pre-Mission Fatigue Self-Assessment Form
- Fatigue Monitoring Log (completed by VO during extended missions)
- Post-Mission Fatigue Review Template

Safety/Compliance/Quality Requirements

- Compliance with CARs Part IX crew duty/rest regulations (CAR 901.19).
- Alignment with Aeria's HSE Fatigue Management protocols.

Reporting or Escalation Processes

- Fatigue-related safety issues logged in mission reports.
- Severe fatigue cases escalated to the Operations Manager or Accountable Executive immediately.

6. Roles & Responsibilities

Management

- Provide fatigue awareness training and enforce rest requirements.
- Monitor fatigue-related trends across operations.

Supervisors

- Enforce work-rest cycles and breaks.
- Reallocate workload if crew fatigue is observed.

Staff

- Arrive fit for duty, having taken adequate rest.
- Report fatigue honestly and without delay.

7. Monitoring, Compliance & Enforcement

How Compliance Will Be Monitored

- Fatigue assessments recorded before each mission.
- VO monitoring during flight operations.
- Post-mission reviews of fatigue-related concerns.

Consequences for Non-Compliance

- Retraining or corrective coaching for failure to follow fatigue protocols.
- Disciplinary action if intentional disregard of fatigue policy leads to safety risk.

Reporting Obligations

- Fatigue-related incidents documented in mission and HSE reports.
- Critical fatigue issues reported to Accountable Executive.
